Convenience

Modernize your dock leveler and minimize energy loss

The ASSA ABLOY M Leveler sealing helps you to seal the gap between levelers and the pit. It is the right solution to improve the working conditions and increase energy saving.

The leveler sealing reduces draughts into the building which improves the working conditions and increases energy savings. It also keeps dust and dirt out of the building.

The seal is constructed in one piece. It has flexible hard rubber, which is made of a recyclable material, and has an extended lifetime and requires low to no maintenance.

Installation is done without any screws or rails. An adhesive strip on the base of the seal makes keeps the seal in place for years.

As it does not need an installation strip, the complete seal is flexible, which minimizes the risk of breaking off when the leveler is skewed.

Technical data

Technical Data

Base	Unbreakable and chemical resistant polypropylene
Flexible rubber	Thermoplastic elastomer (EPDM)
Adhesive	Pre-installed double adhesive textile tape
Packaging	30 M' (15 lengths of 2 meter) 9 M' (3 lengths of 3 meter, valid for 1 single dock leveler)

Available kits for ASSA ABLOY M Leveler sealing

Name	Type	Remarks
Seal adhesive 3x3 mtr	Valid for 1 dock leveler	For leveler side and rear
Seal adhesive 30 mtr	To cut on site. Contains 15 x 2 meter	For leveler side and rear

Thanks to the ASSA ABLOY M Leveler sealing - you can save up to 600 € / year

Example

A building located in the Paris area

- Normal wind conditions (according to official weather definition)
- Temperature controlled at +5° Celsius
- Average energy cost of 0.10 € / kWh

The annual savings will be: 578 €

To get an estimation of annual savings for your building - please contact us for a personal calculation.
