

Modernization Kits ASSA ABLOY M SL-Security

ASSA ABLOY

ASSA ABLOY Entrance Systems

The global leader in
door opening solutions

Key Benefits

Security

Aesthetics

Safeguard your business without compromising with your entrance's aesthetics

New entrance systems aren't the only way to achieve modern entrances. ASSA ABLOY Entrance Systems offers many ways to modernize your doors and equipment. With big steps or small, we can keep your entrances in tune with changing times. Modernization is a solution for customers who have an existing equipment.

Besam automatic door systems can be fitted with additional locking that not only improve security during closing hours, but also safeguard your goods and staff while ensuring an uninterrupted entrance design due to the security feature's discrete design.

With ASSA ABLOY M SL-Security you will:

- Optimize your automated entrance security during closing hours
- Keep your entrance and building aesthetics intact
- Reducing the need of installing a Roller Shutter, which means reducing investment needed while still keeping a higher degree of security.

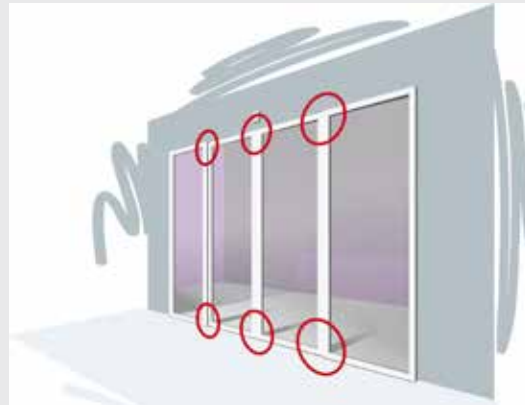

Special anti-derailing device and floor guide reinforcement

1. Basic kit

A special anti-derailing device limits the risk of someone forcing the door leaves open manually or using a crow bar.

Furthermore, the guides on the top prevent the door leaves to be forced inwards and the additional floor guide reinforcement ensure they cannot be lifted either.

2. Additional kit

This solution is recommended on sliding doors systems on the outside of a retail shop or office building, making the need for roller shutters abundant and thereby your store more appealing during closing hours.

Anti-burglary system

The sliding doors equipped with the ASSA ABLOY M SL-Security kit, were tested using manual force and crow bars in a test environment. After about 10 min, participants gave up - exhausted and unsuccessful.

Case study

Doors equipped with the ASSA ABLOY M SL-Security kit, including special reinforced components, passed **all** anti-burglary tests made by reference end-users retailers.
